Sources: CEC, CDTFA, DOC, U.S. EIA

# Estimated Gasoline Refinery Capacity

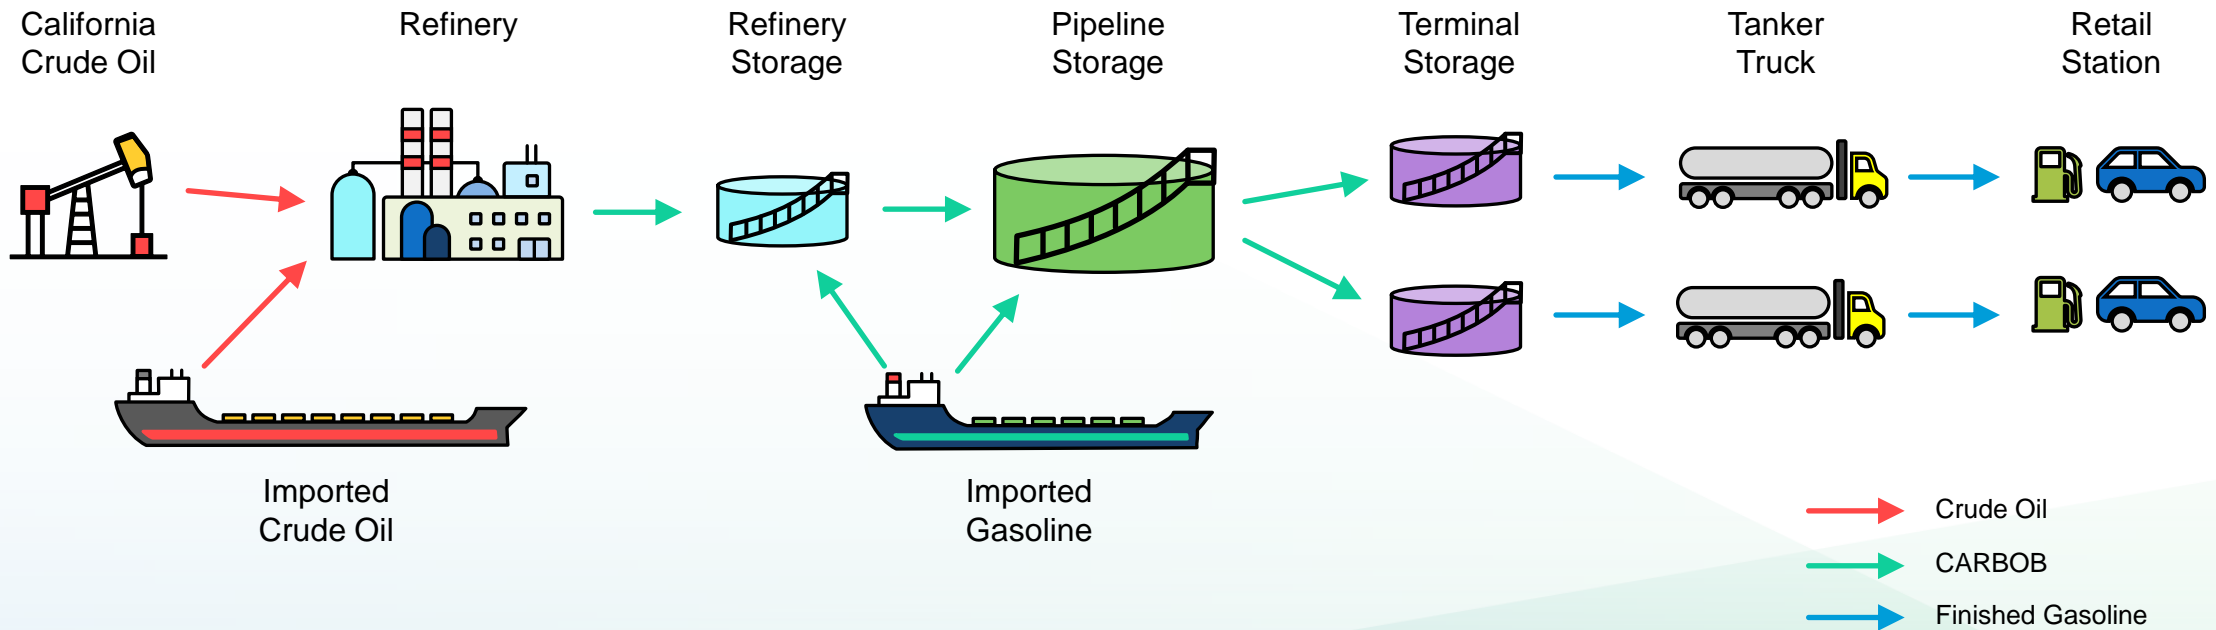

# Petroleum Value Chain

Domestic and imported crude oil is processed at refineries into gasoline and other products.

Gasoline from refineries and additional imports are delivered to pipeline hubs.

Gasoline is blended with ethanol and loaded onto trucks at racks to be delivered to retail stations.

Sources: U.S. Energy Information Administration, CEC

# Petroleum Strategy Task Force

# Roles in Transportation Fuels Sector

1. Scoping Plan
2. Air quality regulations
3. Carbon market/Cap-and-Invest

1. Data collection  
(PIIRA, SB 1322 (2022), SB X1-2 (2023))
2. State emergency planning  
(Petroleum Fuels Set Aside Program)
3. Regulatory authority to mitigate gasoline price spikes

1. Market oversight and investigations
2. Economic and policy analysis

# Building Upon California's Leadership

We are in the midst of a defining challenge in our energy transition. Once again, California will lead the way.

Long-standing  
commitment to  
**climate, air quality,  
health, and the  
environment**

Recent actions to  
enhance **consumer  
protections**

Need for leading the  
transition:

- Support **investment confidence** for industry-wide de-risking of premature **exits** and supporting safe, reliable operations
- Expanding **community and worker safeguards**

# The Road to Zero Emissions

CARB has put a roadmap in place to drastically reduce our dependence on petroleum in the transportation sector by 2045.

AB  
32

Requires we cut GHGs.  
To reach goals, fuel use  
must be cut by 94%.

How cuts happen?

Zero emission cars, trucks and fuels.

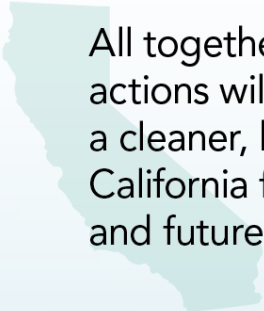

## CLEAN VEHICLE PROGRAMS

CARB rules advance zero-emission  
vehicle deployment:

- 100% light-duty sales requirements by 2035
- Requirements to increase sales of zero-emission trucks
- Incentives and other programs to help fleets adopt cleaner technology

LCFS

All together, these  
actions will help us build  
a cleaner, healthier  
California for current  
and future generations.

Governor Newsom creates  
new oversight committee  
to monitor oil companies

Makes fuel less polluting and encourages  
production of cleaner alternatives

How it  
works:

Dirty Fuel

Cleaner Fuel

# California Transportation Sector: Largest Source of Climate & Air Pollution

371.1 MMT CO<sub>2</sub>e  
2022 TOTAL CA EMISSIONS

# Air Quality Success: Reducing Smog-Forming NO<sub>x</sub>

Statewide NO<sub>x</sub> Trends  
(Annual Avg, Tons/Day)

\*Total NO<sub>x</sub> combines NO<sub>2</sub>, NO, and additional species (so NO<sub>x</sub> is higher than NO<sub>2</sub> alone); Marine Extent: 100 Nautical Miles From Shore

Dealing with Los Angeles Smog in 1958

# Air Quality Success: Reducing Toxic Air Contaminants

# History of California Fuel Standards

- California has been regulating gasoline blends to reduce air pollution since 1971
- Standards updated several times
  - Removed lead
  - Phased out MTBE additive
- Last revised in 2007

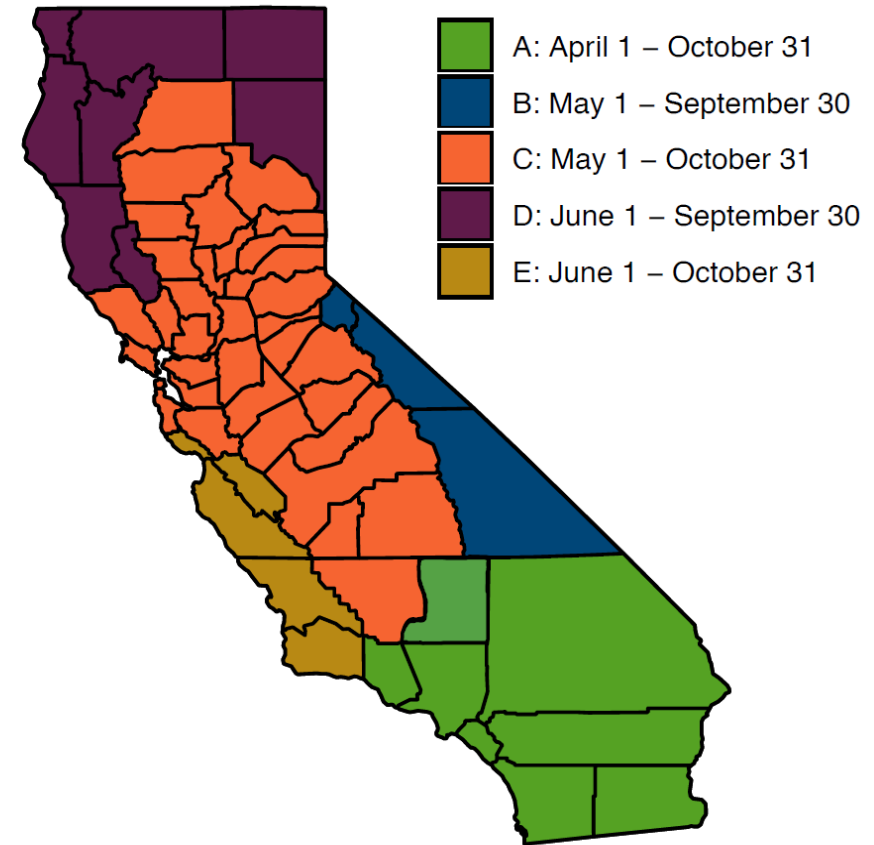

# California Summer vs. Winter Fuel Blends

- Summer blend helps limit ozone formation
- The longest summer blend period is April 1 to October 31
- Use of these fuels is part of the State Implementation Plan to achieve federal air quality standards.

CALIFORNIA RVP CONTROL PERIODS BY AIR BASIN AT RETAIL STATION

Source: CARB

# More Progress Needed

- 18 million Californians live in areas that exceed federal air pollution standards
- Over 5,000 premature deaths and hundreds of emergency room visits are linked to air pollution
- Low-income and disadvantaged communities experience disproportionately high levels of air pollution

# California's Climate Goals

ACHIEVING  
**CARBON**  
NEUTRALITY  
BY **2045**

# Policy Drivers - Key State Legislation

- **AB 32 (2006):** 2020 greenhouse gas (GHG) emission reduction target to 1990 levels calls for a Scoping Plan and updates at least every 5 years
- **SB 32 (2016):** 2030 GHG emission reduction target of 40% below 1990 levels
- **SB 1383 (2016):** 2030 short-lived climate pollutant reduction targets
- **AB 197 (2016):** Specific analyses for the Scoping Plan
  
- **2022 legislation shaping the most recent Scoping Plan:**
  - **AB 1279:** 2045 carbon neutrality target with direct GHG emissions reduction of 85%
  - **SB 905:** Established a Carbon Capture, Removal, Utilization and Storage Program
  - **SB 846:** Extended the Diablo Canyon Power Plant's operations
  - **SB 1020:** Established interim clean electricity targets: 90% (2035) and 95% (2040) to 100% (2045)
  - **SB 1137:** Oil and gas well setbacks of 3,200 feet
  - **SB 1075:** Evaluate the role of clean hydrogen in California
  - **AB 1757:** Requires setting of natural and working lands targets
  - **AB 2251:** 2035 urban tree cover increase of 10%

# Low Carbon Fuel Standard

- Establishes an annual, declining carbon intensity target for transportation fuels used in California
- Lower carbon fuels generate credits

# Low Carbon Fuel Standard - Benefits

15.3% reduction in the carbon intensity of transportation fuels

Over 31 billion gallons of petroleum fuels displaced by low-carbon fuels

75% of fossil diesel displaced by renewable diesel in 2024

\$4 billion annually to support low-carbon investments and including transit

Provides financial assistance for public fleets

# California's Projected Transportation Fuel Mix

On-road transportation fuel mix, 2022 Scoping Plan

# Benefits of Reducing Fossil Fuel Use

*71% reduction in air pollution*

\$200 Billion in health cost savings from decreased fuel combustion

Source: 2022 Scoping Plan Update

# Ongoing Demand from Other Sectors

Aviation Fuel

Ocean-Going Vessel Fuel

Offroad Fuel

Exports to Other Markets

Hydrogen

Refining Co-products

# Ocean-Going Vessels At Berth Requirements

- 2020 update builds on 2007 regulation and sets compliance deadlines for tankers:
  - Southern CA terminals: January 1, 2025
  - Northern CA terminals: January 1, 2027
- Implementation & Compliance Progress
  - Tanker visits and fuel import volumes remain unaffected
  - Majority of Southern CA terminals have established compliance pathways for all their visits
  - Northern CA terminals will submit updated plans by Feb. 2026 in preparation for compliance

# Price Differentials

# What Drives California Retail Gasoline Price Fluctuations?

## NYMEX

*Paper market.*

### Influenced by:

- Crude oil
- Global events
- Tariffs

(LA & SF)

## Spot Markets

*Physical market, high volume,  
located at refinery hubs.*

### Influenced by:

- Gasoline supply
- Refinery outages
- Trading activity
- Summer/winter blend

## Rack Market

*Smaller volume market,  
often located off a pipeline.  
Follows spot market.*

## Retail Market

*Street price. Follows rack  
price, but often 2-3 day  
delay.*

# Fuels Transition Plan (CEC/CARB)

## Requirements

The CEC and CARB must develop and submit a Transportation Fuels Transition Plan.

This plan will discuss strategies aimed at ensuring the supply of transportation fuels is affordable, reliable, equitable and adequate to meet the demand described in the 2022 Scoping Plan.

## Progress

### Joint-Agency Kick-Off Workshop

May 3, 2024

### Stakeholder and Community Meetings

May – December 2024: Coordination  
Early 2025: Community Meetings

- Richmond
- Bakersfield
- Wilmington

### Modeling Results Release

Late 2025

### Submit plan (with CARB)

# Division of Petroleum Market Oversight

Established by Senate Bill X1-2 (Skinner, 2023), the California Gas Price Gouging and Transparency Law, **DPMO's statutory mandate is to protect California consumers.** DPMO's work falls into two broad categories:

**Independent Oversight and Investigations:** Monitoring the market; identifying flaws in market structure, market power abuses, and any other way market participants act anticompetitively or harm consumers; referring potential violations of the law for prosecution.

**Economic and Policy Analysis:** Providing policymakers with expert analysis, findings, and recommendations on transportation fuels markets and the interplay with California's clean transportation transition.

# Early Priorities

**Establishing visible oversight and investigative presence:** Quickly standing up DPMO and engaging with industry to deter and detect misconduct, and to improve compliance with reporting obligations.

**Understanding and mitigating price spikes:** Identifying root causes for the 2022-2023 price spikes (inadequate resupply, low inventories, volatile spot market) and bringing transparency to the public.

**Unraveling the mystery gasoline surcharge:** Using data to explore why California retail gasoline prices are elevated, even after accounting for taxes, fees, and environmental programs.

# Gasoline Affordability Challenges

**Price spikes:** California's gasoline market is uniquely susceptible to price spikes caused by refinery upsets (inadequate resupply, low inventories) and a volatile, thinly-traded spot market

**Rising branded markups:** The gap between branded and unbranded retail gasoline prices is growing and reaching unprecedented levels not seen in the rest of the U.S.

**Neither of these affordability challenges can be fully explained by publicly-enacted taxes, fees, and environmental program costs**

# What the Data Shows

---

- 1. Elevated price levels:** Retail gasoline prices in California averaged \$0.41 per gallon higher than prices in other states *after* accounting for taxes, fees, and environmental program costs since 2015

# Mystery Gasoline Surcharge

Monthly and Annual Average Mystery Gasoline Surcharge, 2023\$/gallon

*DPMO analysis of EIA, CDTFA, and CARB data.*

# What the Data Shows

---

1. **Elevated price levels**
2. **Elevated industry margins:** Gross gasoline industry margins in California increased by \$0.36 per gallon relative to the rest of the U.S. since 2015; margins peaked at \$2.36 during the fall 2022 price spike

# Gross Gasoline Industry Margins

Gross Refining and Marketing Margins in California and Rest of U.S., 2023\$/gallon

Difference in Refining and Marketing Margins (California - Rest of U.S.), 2023\$/gallon

DPMO analysis of EIA, CDTFA, and CARB data.

# What the Data Shows

---

1. **Elevated price levels**
2. **Elevated industry margins**
3. **The role of market power:** About 90% of in-state refining capacity is controlled by four companies, and about 50% of refiner sales are through vertically integrated sales channels

# Market Concentration

## Crude Refining Capacity Among California Refiners with Gasoline Production October 2024

Rank	Refiner with Gasoline Production Capacity	Total CA Crude Refining Capacity (BPD)	Share of Total CA Crude Refining Capacity	Cum. Share of CA Crude Refining Capacity
1	Chevron Corp	514,271	32%	32%
2	Marathon Petroleum Corp	365,000	23%	55%
3	PBF Energy Co LLC	316,400	20%	75%
4	Valero Energy Corp	230,000	14%	89%
5	Phillips 66 Company	139,000	9%	98%
6	Kern Oil & Refining Co	26,000	2%	100%

**Top two share  
increases to 61%  
in late 2025**

**Top four share  
increases to 98%  
in late 2025**

Four-Firm Concentration Ratio in Rest of U.S.

48.0%

*DPMO analysis of data from EIA Form 820. Table includes refineries with gasoline capacity, excludes refineries that do not produce gasoline and the Phillips 66 Rodeo facility, which converted to renewable fuel in March 2024. Rank is based on total crude refining capacity, which includes a company's refining capacity across refineries and products.*

# Vertical Integration

2019 Share of Refiner Sales by Channel

■ California ■ Rest of U.S.

*Half of California Refiner Sales Are Through Vertically Integrated Channels*

*DPMO analysis of data from EIA Form 782 data. 2019 is the most recent year for which federal and state sales channel data is publicly available.*

# What the Data Shows

---

1. Elevated price levels
2. Elevated industry margins
3. The role of market power
4. **Price spikes and increasing branded markups:** In addition to spot market price spikes, branded prices are increasing. Retail gasoline sold at major brands has the highest MGS of \$0.72 per gallon since 2015

# Spot Market Price Spikes

Monthly California-Rest of U.S. Spot Price Differential, 2023\$/gallon

*DPMO analysis of monthly spot prices from EIA and OPIS. California spot prices computed as the average of Los Angeles and San Francisco spot prices. Rest of U.S. spot prices computed as the average of New York and Gulf Coast spot prices.*

The chart displays the price evolution of four oil types over a decade. The y-axis represents price in dollars per barrel, ranging from -0.25 to 0.75. The x-axis shows time from June 2013 to March 2024. A vertical black line at the start of 2015 marks the Torrance Refinery Fire. Dealer Tankwagon prices are consistently the highest, followed by Branded Rack, Unbranded Rack, and Bulk prices. All prices show a significant increase in early 2015, followed by a period of relative stability with some fluctuations. Dealer Tankwagon prices peaked in early 2019 and again in early 2022. Branded Rack prices also peaked in early 2019 and early 2022. Unbranded Rack prices peaked in early 2019 and early 2022. Bulk prices peaked in early 2019 and early 2022.

Time	Dealer Tankwagon	Branded Rack	Unbranded Rack	Bulk

*DPMO analysis of aggregated CEC Form M1322 industry data. Wholesale prices in this chart are reported by refiners and exclude taxes, fees, and environmental program costs. This analysis excludes sales through company outlets.*

# Rising Branded Retail Prices

MGS by Retailer Types, 2023\$/gallon

DPMO analysis of OPIS retail data. Major retail brands include Chevron, ExxonMobil, Shell, and 76.

# What the Data Shows

---

1. Elevated price levels
2. Elevated industry margins
3. The role of market power
4. Price spikes and increasing branded markups
5. Refining sector “haves” and “have nots”: Outside of price spikes, large integrated refiners benefit from marketing/retail networks, while smaller non-integrated refiners are marginal

# Refining “Haves” & “Have Nots”

Gross Gasoline Refining Margin by Seller Type, 2023\$/gallon

GGRM Differences by Seller Type (Brand-Unbranded), 2023\$/gallon

*Notes and Sources: DPMO analysis of CEC M1322 data. “Brand focused” refiners includes California refiners with more than 25 percent of wholesale volumes in the DTW and branded rack channels. “Unbranded focused” refiners are those with fewer than 25 percent of sales in DTW and branded rack channels.*

# Refining Operating Expenses

Average Quarterly Operating Costs for California Refineries, 2023\$/gallon

*DPMO analysis of CEC M1322 data and quarterly earnings data reported to investors by California refiners. This chart only includes data for California refiners that report West Coast operating expenses and file 1322 data. Analysis excludes depreciation and amortization costs across both data series for consistency.*

# What the Data Shows

---

1. Elevated price levels
2. Elevated industry margins
3. The role of market power
4. Price spikes and increasing branded markups
5. Refining sector “haves” and “have nots”

# Estimated Gasoline Refinery Capacity

# 2024 Refining Margins Fall Globally

## Regional September Gross Refining Margins (2015-2024)

Dollars per gallon

Source: Bloomberg

### Lower Demand

- Slow economic activity in China and Europe
- Increased penetration of Electric Vehicles

### Increased Petroleum Refining Capacity

- Al-Zour (Kuwait, 2024) 615,000 b/d
- Duqm (Oman, 2024) 230,000 b/d
- Dangote (Nigeria, 2023) 650,000 b/d
- Dos Bocas (Mexico, 2022) 340,000 b/d

### Petroleum Refinery Closure Announcements

- Lyondell Basell closed its 264,000-b/d refinery in Houston, Texas, in first quarter of 2025 (one of the largest in North America)
- Expected refinery closures and conversions in Asia, Europe and in the US

b/d = barrels per day

# Transitions Across the World – Lessons Learned

## U.S. coal production:

Long-term demand declines have produced repeated bankruptcies and mass layoffs.

## Norway's Equinor:

Majority state-owned oil company channels revenue to energy transition but depends on oil exports to do so.

## U.K.'s last steel plant:

Urgent state takeover preserved capacity, though ad hoc action led to political controversy.

## California transition from fossil transportation fuels:

How can we learn from others' successes while avoiding their pitfalls?

## Australia's refineries:

Government production subsidy kicks in when refineries make a loss but may not prevent future exits.

# Preliminary Contours of Approach in consultation with impacted communities & stakeholders

## 1. Existing At-Risk Refinery Strategy

*Based on current analysis, CEC thinks it is prudent to take steps to immediately stabilize in-state supply.*

**Maintain operations:** Enact strategies for refineries needed to meet demand to be financially stable and run safely and responsibly.

## 2. Concurrent System-Wide Strategy

*System-wide needs must be addressed in the near-term to protect consumers and to provide the investment confidence needed to safely meet demand while achieving climate goals and health protective standards.*

**Investment confidence:** Industry-wide de-risking of premature exits and supporting safe, reliable operations.

- Ensure timely infrastructure for sufficient in-state refining capacity, imports, storage, and delivery of refined products.
- Stabilize California crude oil production and distribution to supply refineries while honoring federal and state law and transition strategy.
- Coordinate regulatory paradigms across levels of government towards these common goals.

## 3. Transition Strategy

*Near- and medium-term actions must be part of a holistic transition strategy that is built on shared understanding, collaboration, and development of policies across state agencies and stakeholders.*

**Managed transition strategy:**

- Support and protect California's authority to set emission standards and achieve climate goals.
- Further California's ability to diversify and evolve its transportation sector to comply with federal and state air quality standards and meet climate goals.
- Identify and pursue necessary transition funding to support climate, health, community, and worker priorities.
- Identify challenges, opportunities, and strategies for the future of land affected by the transition (e.g. remediation, marketability, and value).

# Thank you!
